### **MAIN PROJECT:**

#### **Emotion-based music player using CNN**

This is a computer application meant for all type of users, specifically the music lovers. So here the player play the song according to the user's emotion which is detected in their facial expression. The scope of emotions involves normal, sad, surprise, and happy. This system involves image processing and facial detection technologie

## **MINI PROJECT:**

### **1. Water tank monitoring system using Arduino**

It is used to sort out the issues associated with water tank when it overflows and also used to check the level of the water using sensor so that whenever the water goes below certain threshold limit a notification is sent to user through the android application and users needs to turn on the pump. Also, when there is an overflow of water the water tank it uses sensor to detect the water level so that if the water level goes above certain limit the buzzer will automatically on and them it will indicate the user.
